

Access Road (was rock-lined during construction)

Access road drains to the main road into parking area; note curb cut and modular pavement

Modular pavement; allows water to infiltrate rather than run off

Modular Pavement (opposite view); access road in background)

Modular pavement

Modular pavement (left); traditional parking surface (right) with water draining into infiltration area

Traditional parking surface draining into infiltration area (opposite view)

Interpretive sign explaining storm water BMPs

Sign includes NPS Program logo!!

Road-stream crossing with reinforced abutments, vegetation

Looking out towards Trevor Creek pond and playground

Rock-lined channel (storm water conveyance channel) is the outlet from a concrete pipe in foreground

Rock-lined channel flows to a drop weir (a type of grade stabilization structure)

Below the weir, water goes into an infiltration area

Rain garden sign

Rain
garden

Rain garden

Detention basins handling runoff from parking lot (at right)

Native plants used throughout project area to help soak up rain water
